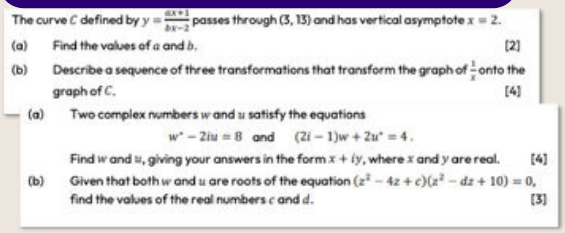
Struggling with tackling questions on this major topic? Revise and recall key concepts and practise with exam grade questions in this revision session.

Materials will be included in this session



The curve C defined by $y = \frac{ax+1}{bx-2}$ passes through (3, 13) and has vertical asymptote $x = 2$.

(a) Find the values of a and b. [2]

(b) Describe a sequence of three transformations that transform the graph of $\frac{1}{x}$ onto the graph of C. [4]

(a) Two complex numbers w and u satisfy the equations

$w^* - 2iu = 8$ and $(2i-1)w + 2u^* = 4$.

Find w and u, giving your answers in the form $x + iy$, where x and y are real. [4]

(b) Given that both w and u are roots of the equation $(z^2 - 4z + c)(z^2 - dz + 10) = 0$, find the values of the real numbers c and d. [3]
